Occasionally, certain chemicals may cause plant injury. If this happens, the symptoms are often similar to those caused by other factors. It is possible that the plant injury may occur even though no injury was noted in previous seasons.

PHOTOXICITY: Certain chemicals may cause plant injury by being sprayed at the wrong stage of plant development or when used at the wrong rate of application.

Consult your County Agricultural Commissioner for correct methods of disposal of leftover spray materials.

WARNING: Never burn pesticide containers. Empty containers are LETHAL!

Drift from the property onto other properties or crops.

The chemical label is LEGAL RESPONSIBILITY of the grower. Keep the chemical label at the area where the chemical was used. Follow instructions on the label. Drip sprays and other materials on the area where the chemical was used. Failure to follow instructions can cause injury to other crops or people.

Always read and carefully follow all precautions and safety recommendations on the label.
