

FROM DATA TO PROFITABILITY.

An interactive, cloud-based platform, accessed through any browser, for storing, visualizing and comparing all types of maps and geographic farm data.

Correlate and integrate your farm data from various sources:

- Aerial photos
- Soil physical and chemical maps
- Topographic maps
- Leaf analysis
- Yield maps
- Airbus VERDE™ Biophysical parameters

Data captured by IoT (Internet of Things) devices such as:

- Soil moisture probes
- Tracking devices
- Micro weather stations

Monitor crop, pest, soil, and weather conditions.

Compare layers of data in one consolidated platform.

Convert conclusions into plans of action.

MAKE BETTER DECISIONS, FASTER.

- Improved data storage capability and data security.
- Privacy of information.
- Consolidation of data and comparison tools for layers.
- Correlation and integration of information.
- Visualization of information for better decision making.
- Ability to measure the spatial and temporal variability in soil and vegetation.
- 24h support
